

ACOUSTIC SLIDERS - DDA COMPLIANT / LARGE FORMAT

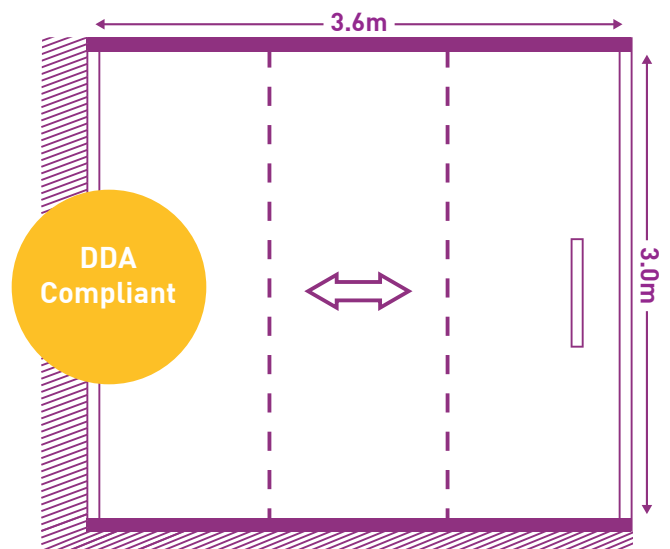

PRODUCT NAME SLIDE: ACOUSTIC GLAZED & SOLID SLIDERS

DDA Compliant Large Format Sliders – Now Available

The Lotus Acoustic Slider range are designed to comply with the Disability Discrimination Act (DDA) as required within the Building Code of Australia (BCA volumes 1 and 2) and outlined within the Australian standards AS 1428.1 and AS 1428.2.

Lotus can now provide glazed Acoustic Sliders in large format up to 3.0m high by 3.6m wide and 2.5m high by 4.5m wide, and solid Acoustic Sliders 3.0m high by 3.6m wide, all of which meet DDA compliant opening forces (20N). This is achieved via a load balancing system incorporated into the trolley, creating a low friction trolley which results in a constant

operational force (proportional to weight) for sliders up to 411kg. For dual and triple sliders, DDA opening force is only required for the first panel of the wall.
